

CELLTERMI

Peptosome

Where GHK-Cu peptide meets
modern skin longevity.

CELLTERMI

PEPTOSOME SKINCARE

Luxury Peptide Skin Technology

The new realisation of skin longevity.

Skin longevity is no longer about chasing instant correction. It is about understanding how skin behaves, communicates, and sustains itself over time.

Celltermi Peptosome Skincare represents a new chapter in topical skin technology.

One defined by peptide intelligence, barrier integrity, and consistency rather than intensity.

Rooted in advanced peptide research and refined cosmetic biotechnology, the Celltermi Peptosome Skincare range has been developed to support the skin's natural communication pathways through high-quality, high-concentration copper peptide systems, delivered within elegant, lipid-supported cosmetic formulations.

This is luxury skin technology for those who respect their skin deeply and think long-term about how it ages.

Designed for daily use.

Refined for modern skin.

Built for longevity.

BRAND PHILOSOPHY

Skin longevity is a daily conversation.

Skin responds best to what it understands and receives consistently.

Rather than relying on cycles of intensity and recovery, longevity-focused skincare supports the skin through steady, intelligent nourishment. When the barrier is respected and communication within the skin is supported, skin remains more resilient, comfortable, and balanced over time.

Modern skin longevity is built on three principles: consistency, barrier intelligence, and signalling.

Peptides represent the next evolution in topical skin technology because they work in alignment with the skin's natural processes. As skin-recognised messengers, peptides support communication pathways that help the skin function optimally day after day.

Copper peptides sit at the centre of this shift. Naturally present in the skin, they play a key role in supporting collagen signalling and skin strength when delivered through refined, well-designed topical formulations.

Celltermi Peptosome Skincare is developed with this understanding. Each formula is peptide-dense, barrier-aware, and designed for regular use as part of a modern longevity-focused routine.

Longevity is achieved through intelligent consistency.

THE LANGUAGE OF SKIN COMMUNICATION

Copper peptides, including Copper Tripeptide-1 (GHK-Cu), are naturally occurring signalling molecules within the skin. They play a role in how skin communicates, adapts, and maintains balance over time.

GHK-Cu is formed from skin-recognised amino acids, including lysine, which contributes to skin structure and support. When delivered through refined topical formulations, this peptide complex integrates seamlessly with the skin's natural communication pathways.

In topical skincare, copper peptides support skin behaviour through consistent, daily use. By encouraging balanced communication within the skin, they help maintain resilience, comfort, and long-term skin quality.

Advances in cosmetic biotechnology now allow copper peptides to be delivered topically in a stable, reliable manner. When supported by barrier-compatible lipids, including cholesterol, peptide delivery is enhanced while skin comfort and balance are maintained.

In this category, quality and concentration define performance. Peptide-dense systems built with intention and supported by skin-identical components offer far greater value.

Celltermi Peptosome Skincare is developed using a multi-copper peptide system and high-quality, high-load peptide technology, delivered within a lipid-supported framework designed for intelligent, consistent skin longevity.

This is the refinement of peptide technology, delivered with precision and restraint.

THE ROLE OF THE SKIN BARRIER IN LONGEVITY

Barrier-first is the future of skin longevity.

Skin longevity depends on daily support for the skin barrier.

When stressed, the barrier loses comfort, resilience, and balance. Supporting it maintains hydration, comfort, and protection, promoting stronger-looking skin long term.

Peptides perform best when delivered with lipids that support the skin barrier. They help improve the firmness, smoothness, and resilience of skin. Lipid-supported delivery allows peptides to easily integrate into daily skincare, supporting balanced skin while maintaining comfort and stability.

The creation of a stronger, more resilient skin barrier sits at the core of the Celltermi Peptosome Skincare philosophy.

Each formula uses lipid-supported peptides, blending peptide intelligence with barrier-aware formulation to support longevity through consistency.

This formulation design supports daily use of advanced peptide technology with comfort and consistency, aligning with a modern longevity-focused routine.

THE LUXURY PEPTOSOME CREAM

Product positioning

A lipid-supported copper peptide matrix for daily skin longevity

What it is

The Luxury Peptosome Cream is a rich, butter-like moisturiser developed to deliver peptide technology within a deeply comfortable, refined formulation.

Highly concentrated yet effortless to wear, the cream melts into the skin on contact, delivering lasting comfort without heaviness or residue. A small amount goes a long way, making it ideal for consistent, twice-daily use as part of a long-term skin longevity routine.

Designed to feel indulgent without being overwhelming, the texture balances richness with elegance, leaving skin nourished, smooth, and dressed rather than coated.

Key ingredients & benefits

✦ *Copper peptides (GHK-Cu complexes)*

Copper peptides support skin communication, helping to encourage balanced skin behaviour over time. Through consistent use, they support collagen signalling and contribute to long-term skin resilience.

✦ *Niacinamide*

Niacinamide strengthens the skin barrier while helping to refine tone and texture. It supports overall skin balance and enhances long-term skin quality when used regularly.

✦ *Ceramides, cholesterol & phytosphingosine*

This skin-identical lipid blend supports barrier integrity, helping to reduce moisture loss while improving comfort, balance, and resilience. Together, these components reinforce the skin's natural protective function.

THE CELLTERMI PEPTOSOME COPPER PEPTIDE SPRAY

Product positioning

**A copper peptide signalling mist for
modern skin longevity.**

What it is

The Celltermi Peptosome Copper Peptide Spray is a fine, lightweight mist that delivers copper peptide technology in a modern, effortless format.

Created to complement the Luxury Peptosome Cream, the spray provides an additional layer of peptide support without weight or residue. It is designed for use in the morning and evening, with one optional mid-day refresh when needed.

The formula is intentionally balanced. It is not designed for constant reapplication, but for thoughtful use that supports the skin without overwhelming it.

Key ingredients & benefits

- ✦ **Copper Tripeptide-1 (GHK-Cu)**
Supports skin signalling pathways and helps strengthen, balance, and promote long-term resilience with consistent use.
- ✦ **Adenosine & hyaluronic acid**
Comfort the skin while supporting hydration, smoothness, and a refined skin feel.
- ✦ **Multi-peptide complex**
Supports skin structure and smoothness, reinforcing overall skin quality over time and complementing copper peptide activity.
- ✦ **Barrier-supporting lipids (ceramide NP, cholesterol, phytosphingosine)**
Help protect the skin barrier, reduce environmental stress, and support skin comfort and balance throughout the day.

How it fits into a routine

- ✦ Applied after cleansing and before the cream
- ✦ Used morning and evening
- ✦ One optional mid-day refresh if needed
- ✦ Can be applied over makeup as a light setting mist
- ✦ Ideal for travel, air-conditioned environments, or dry climates

Designed to *support the skin.*

Sensory experience

✦ Ultra-fine, weightless mist

✦ Absorbs quickly with no stickiness

✦ Leaves skin feeling fresh, comfortable, and balanced

✦ Suitable for use throughout the day without heaviness

How does it complete the range

- ✦ Provides peptide support in a lighter, more flexible format
- ✦ Extends the longevity philosophy beyond traditional cream use
- ✦ Encourages modern, lifestyle-friendly skin care habits

RITUAL, DONE WELL

Consistency builds skin longevity

Skin longevity develops through regular, well-considered care.

Peptide technology is designed to work within a steady daily rhythm. Morning and evening application establishes ongoing skin communication, supporting comfort, balance, and long-term skin quality.

The Celltermi Peptosome Spray offers a **light mid-day refresh when needed**, delivering additional peptide support while remaining harmonious with the skin.

Daily use, thoughtful timing, and refined formulations make skin care instinctive rather than intensive, a natural part of modern longevity.

HOW THIS RANGE SITS IN MODERN SKINCARE

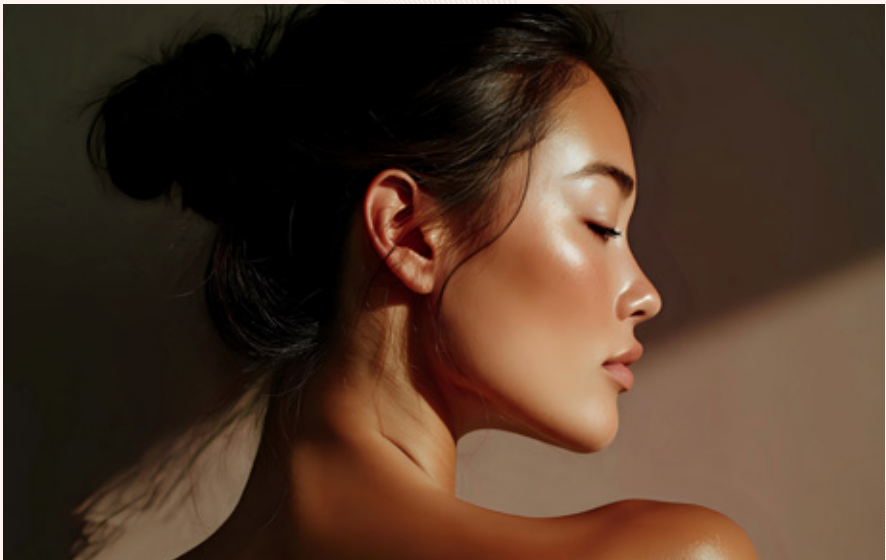

Modern skincare is shaped by how products support the skin on a daily basis.

Topical peptide technology plays a central role in everyday skin communication. When used consistently, it supports balance, comfort, and long-term skin quality as part of regular care.

Celltermi Peptosome Skincare is designed to occupy this daily space. The range focuses on refined, peptide-led formulations that integrate seamlessly into modern routines, supporting the skin through consistency rather than intensity.

By prioritising skin communication and barrier-aware formulation, Celltermi Peptosome Skincare provides a considered foundation for longevity-focused skincare, one that fits naturally into daily life and evolves with the skin over time.

WHO THIS RANGE IS FOR

Celltermi Peptosome Skincare is created for those who take an informed, intentional approach to how their skin ages.

It is designed for educated consumers who value ingredient quality, formulation intelligence, and consistency. Those who prioritise texture, comfort, and long-term skin quality, and who choose products based on how they perform over time.

This range speaks to individuals who look beyond surface trends and focus on maintaining skin balance, resilience, and refinement as part of everyday care.

Celltermi Peptosome Skincare is for those who view skincare as part of a considered lifestyle, one centred on longevity, quality, and thoughtful daily rituals.

A MODERN STANDARD IN SKIN LONGEVITY

Celltermi Peptosome Skincare reflects a considered approach to modern skin longevity, one rooted in peptide intelligence, barrier awareness, and daily consistency.

Every formulation is designed with intention. From peptide-dense copper peptide systems to lipid-supported delivery and refined sensory experience, each element serves a purpose within a long-term skin care philosophy.

This is skincare developed to integrate seamlessly into modern life. Elegant, effective, and designed for those who value quality and longevity.

Where peptide intelligence meets modern skin longevity.
