

EXO-GROW™

L.E.D. & LASER CAP

BOOST SCALP & HAIR RENEWAL • POWERED BY DP DERMACEUTICALS EXO-GROW™

Revolutionise Your Hair and Scalp Care Regime

DermapenWorld™ is a pioneer in electro-dermatological beauty. Now, coupled with Dp Dermaceuticals EXO-GROW™, we bring you the ultimate solution for a healthier, stronger scalp and hair — the EXO-GROW™ L.E.D. & LASER CAP.

Lightweight, ergonomic, and effortlessly stylish, this portable unisex cap is the ideal on-the-go hair revitaliser for patients with hair loss, shedding or thinning. Powered by 202 LEDs at 620nm, 650nm, 660nm and 72 lasers at a 650nm wavelength, it deeply stimulates the scalp to restore the hair's natural vitality and appearance.

Designed to stimulate follicles and enhance cellular activity and blood flow, it promotes the growth of thicker and healthier hair in only 10 minutes. The hair receives the necessary nutrients and oxygen, improving density and overall hair condition.

People who have undergone a course of 3-5 weekly sessions for a minimum of 6 weeks using 650nm wavelength reported significant improvements in hair density and reduced shedding*.

This hair-revitalising cap can be used independently or synergistically with the use of our topical serum, EXO-GROW HAIR TONIC™. Red Light LED and Laser have been clinically proven to enhance the delivery of topicals*.

Non-invasive, portable and convenient, it comes with a built-in rechargeable power bank. There are no electrical cords, allowing on-the-go usage at work or while relaxing. This flexibility ensures patients can maintain their hair renewal regime effortlessly for noticeable results.

ULTIMATE BENEFITS

- Clinically proven wavelengths for improved hair density and thickness
- Adjustable fit to ensure it is suitable for both men & women
- Can be used synergistically with EXO-GROW HAIR TONIC™
- Non-invasive approach to hair loss
- Suitable for hair shedding and thinning
- Lightweight, ergonomic, effortlessly stylish
- On-the-go portability and convenience
- Standard universal USB Charging ability

CORE FEATURES

Proven, Hair-revitalising Red Light LED (650nm wavelength)

Clinical Studies have shown* that the 650nm wavelength can improve hair density and thickness, making it an effective and non-invasive solution for hair loss. This wavelength is also suitable for reducing hair thinning and shedding as it stimulates hair follicles, enhances cellular activity, boosts blood flow and promotes hair growth.

Red Light LED and Laser has been clinically proven to enhance the delivery of topicals*, making it a perfect complement to hair-boosting serum EXO-GROW HAIR TONIC™.

- Reduces hair loss and excessive shedding
- Boosts microcirculation to enhance nutrient flow for stronger roots.
- Soothes scalp inflammation — a calmer scalp means healthier hair.
- Increases hair density to help patients achieve the volume they're looking for.
- Encourages thicker, fuller strands.
